

Sprint 2 Report

Slug Pantry

Slugs en la Cocina

November 3rd, 2019

Actions to stop doing:

The team needs to stop procrastinating when it comes to working on the project. Keeping track of Trello is important and spending at least a couple of minutes here and there browsing the supplementary material on discord could help in a lot of ways. The team also needs to stop spending more time researching topics and more time actually coding the app.

Actions to start doing:

The team needs to start finishing up remaining user stories. Also the team needs to start wrapping up the research stage of the project.

Actions to keep doing:

The team has done a good job communicating and meeting, we should keep this up. The team should also continue to build on our current app so that we can add more features and achieve our goal. Additionally, we should keep researching as needed so that we can progress with our app.

Work Completed:

Created a basic app in React Native

Added more functionality to the app

Improved the app's list performance

Work Completion rate:

We were able to finish user story 2 and are pretty much done with user story 3. We spent approximately 12 hours in total researching and working on the project during this sprint.
