

Working Prototype Known Problems Report
Slug Pantry
Slugs en la cocina
12/2/2019

List of functions not working correctly:

- Cannot remove recipes from the favorites page (but you can do it from the recipe list).
- App does not seem to visually port correct sizes to certain devices(One member's 1Plus 7T could not load correctly sized buttons. These buttons will still work, but some text is cut off.
- If you attempt to use a invalid/malformed email for signing up, the app will crash. This includes having a space after your email
- If you attempt to log in with an account that is not signed up, the app will crash.
- If you attempt to sign in with an account that has already been signed up, the app will crash.
- If you attempt to log in with the incorrect password, the app will crash.
- Currently, there seems to be a bug with creating new accounts. We do not know the cause, and the issue might lie with Firebase. Currently Firebase seems to not let us create new accounts or the app gets an error from Firebase saying that the account has not been linked. Also, the app seems to restart itself instead of crashing whenever this bug occurs.
